 - VCR

Language

- Ukrainian - Fluently
- English - Intermediate

Education

Information Technology Design
Donbass State Engineering
Academy

Summary

A software developer with 5 years of experience in web development, including 4 years of commercial Ruby on Rails experience. I am motivated to continuously improve my skills and contribute to a growing company. A reliable and responsible team player.

Work Experience

Product Information Platform

Developed a platform that provides users with detailed product information, categorized by type, with full descriptions and purchase recommendations. I worked on both the admin panel and the frontend. The server side was built with Rails API and the frontend was built with React.

Collectible Cards

Contributed to the development of functionality for an Android mobile app and website centered around collectible cards. The project utilized Express.js, Next.js, and React Native, with MongoDB as the database.

Shopify SEO Plugin

Developed a Shopify plugin that identifies and resolves SEO issues, either automatically or with recommendations. The project involved background task processing with Sidekiq. I also implemented automated testing (unit and feature tests) for all developed features.
